

Case Study: Account Takeover via Phishing

Case ID: CASE-003

Date: May 2025

1. Summary

A customer unknowingly provided login credentials to a phishing website. The attacker logged in from a foreign IP and attempted multiple transfers.

2. Indicators

- Login from new device and location
- Multiple failed MFA attempts
- High-value transfer attempts

3. Resolution

The system detected abnormal login behavior and generated a high-risk alert. Transfers were blocked, and the account was secured.

4. Lessons Learned

Customers must be educated on phishing risks and MFA best practices.

End of Case Study.
